Manuscript Template

Paper Title – Should be written catchy

Abstract

- About domain – 3 lines
- Problem statement – 3 lines
- About Existing methodology – 3 lines
- Shortfall of Existing methodology – 2 lines
- Proposed methodology and its advantage – 3 to 4 lines
- Results and achievement – 3 to 4 lines
- Scope for future work – 2 lines

Keywords – 6 separated by comma (In alphabetical order)

1. Introduction

- About domain – 1 paragraph
- Problem statement and motivation – 1 paragraph
- About Existing methodologies – 2 paragraphs
- Shortfall of Existing methodologies – 2 paragraphs
- Proposed techniques, aptness, and its advantage – 2 paragraphs
- Manuscript structure – Describe about structure of the paper – 1 paragraph

Note: In this section use 15 suitable latest (5 years) reference scholarly papers

2. Related works

Select 15 suitable latest (5 years) reference scholarly papers and write following contents for each paper

- What is the solution author proposed? – 3 lines
- Methodology, techniques, simulation/emulation/IDE tools used for experimentation/implementation – 2 Paragraphs
- Result and effectiveness – 3 lines
- Research gap – 1 line.

3. Proposed work/system

- Problem formulation – 2 paragraphs
- Proposed system's architecture diagram (Need to be drawn clearly) – Figure 1
- Explanation about system's architecture (figure must be referred in the content) - 2 paragraphs
- Detailed methodology with diagram illustrations
- About modules and its functions

- Flow diagram and its explanation
- Minimum 6 mathematical equations and its explanation
- Algorithm and its explanation

Note:

1. This section should be written in minimum of four pages that should explain the entire team contribution in the work.
2. This section should have minimum of 5 diagrams, 6 equations, 2 algorithms and its explanations.

4. Implementation and result analysis

- About the simulation/emulation/IDE tools used for experimentation/implementation, its configuration, system setup and its commands – 2 paragraph
- One Implementation tool screenshot.
- Parameter setup – Table format
- Minimum of Five Performance analysis metrics (For Eg. Throughput, average delay, overhead, accuracy, false alarm rate and so on)
- Choose two or three related work for comparison with our work (the same 2 or three references need to be added in the reference section.
- Graph/plot/table for each performance analysis metrics and justification for the result obtained.

5. Conclusion and scope for future work

- About the proposed work – 2 lines
- About Existing methodology – 2 lines
- Proposed methodology and its advantage – 2 lines
- About the simulation/emulation/IDE tools used for experimentation/implementation – 1 line
- Results and achievement – 4 lines
- Scope for future work – 4 to 5 lines

6. References (Totally 30 papers, books, websites – All should be latest (2018 – 2024). The reference should be in A

- 10 from Introduction
- 15 from related works
- 2 from simulation/emulation/IDE tools used for experimentation/implementation
- 2 to 3 from result performance comparison work

Reference format should be as follows

[1] Filippini, Massimo, and Lester C. Hunt. (2011) “Energy demand and energy efficiency in the OECD countries: a stochastic demand frontier approach.” *Energy Journal* **32** (**2**): 59–80.

[2] Filippini, Massimo, and Lester C. Hunt. (2012) “US residential energy demand and energy efficiency: A stochastic demand frontier approach.” *Energy Economics* **34** (**5**): 1484–1491.

[3] Weyman-Jones, Thomas, Jùlia Mendonça Boucinha, and Catarina Feteira Inàcio. (2015) “Measuring electric energy efficiency in

Portuguese households: a tool for energy policy.” *Management of Environmental Quality: An International Journal* **26** (**3**): 407–422.

[4] Saunders, Harry (2009) “Theoretical Foundations of the Rebound Effect”", in Joanne Evans and Lester Hunt (eds) *International Handbook on the Economics of Energy*, Cheltenham, Edward Elgar

[5] Sorrell, Steve (2009) “The Rebound Effect: definition and estimation”, in Joanne Evans and

Lester Hunt (eds) *International Handbook on the Economics of Energy*, Cheltenham, Edward Elgar
